

North Kent Super National Nature Reserve – Coleoptera Review

Tony Witts July 2024

Summary

Over 900 species of Coleoptera (the beetles) have been recorded in the vicinity of the proposed North Kent Super National Nature Reserve (NNR). With just under 3000 species¹ recorded from the whole of the County this area is significant for beetle diversity.

The most significant individual species in the proposed Super NNR area is the Endangered Six-spotted Pot-beetle (*Cryptocephalus sexpunctatus*) discovered at Crabbles Bottom in 2022. This attractive species, which is also present on the other side of the Medway Valley (Borstal) at its only other known Kent locality, relies on young trees, fresh re-growth and low branches of its host plants. It tends to favour dense scrub on west facing calcareous slopes where the aspect provides a warm and sheltered environment. Adults are found from May to July on the host trees as well as yellow Asteraceae and wood spurge. In captivity the larvae have been found to feed on withered leaves, fresh leaves and catkin pollen of hazel, though in the wild it probably uses a wider range of trees. Adults have been collected from hazel, crack willow, oaks, hawthorns, aspen and broom². In Kent, hazel seems to be significant. Its life cycle takes 2 years to complete.

The assemblage of deadwood beetles found in the Cobham area has been a draw for coleopterists since Victorian times. Cobham Park and woods are listed as nationally important for this assemblage. Three principal niches are represented: Heart wood decay; bark and sapwood decay; and fungal fruiting bodies. Each has its own distinct suite of species.

Overall, the most significant feature of the proposed Super NNR area is the mosaic of habitats present which supports a large diversity of beetles. Bare chalk, short sward, tall sward, scrub, woodland edge, woodland canopy, dead wood and veteran trees all have nationally important species associated with them in assemblages that can be assessed to be in good condition, as described in the following sections. The management of the site should seek to:

- Ensure a continuum of dead wood is present throughout the site using a range of tree species and thicknesses of wood; both standing and lying.
- Maintain, extend and connect the bare ground and short sward habitats.
- Maintain, extend and connect areas of high botanical diversity through woodland areas.
- Remove non-native shrubs.

Priorities for survey should include:

- Site wide saproxylic beetle survey by flight interception traps to establish the distribution and current status of this nationally important assemblage. Particular attention should be placed on Cobham Hall School, The Leisure Plots, Ashenbank Wood, Cobham Wood, Silverhand Estate and the Holborough Woodlands.
- Assess the availability of dead wood in a variety of aspects.
- Survey scrub edge and woodland rides (in particular hazel on western facing slopes) for the Six-spotted Pot-beetle.

¹ Witts T. (2021) Kent's Beetles. In Tinsley Marshall et al. The State of Nature in Kent 2021, Kent Nature Partnership. pp 271-281.

² Cox M. (2007) Atlas of the Seed and Leaf Beetles of Britain and Ireland. Pisces Publications. pp 111.

- Survey mature hazel scrub edges with dead branches for *Lymantior coryli*. Especially unflailed hedgerows and woodland edges adjacent to unimproved grassland.
- Establish the area occupied by *Scybalicus oblongiusculus* by pitfall trapping in likely areas of chalk grassland and arable edges.
- Encourage general invertebrate recording in less well covered areas such as Silverhand Estate, Holborough Woodlands, perhaps via the Kent Field Club.

Beetle fauna in the proposed Super NNR Area

The records held by the Kent & Medway Biological Records Centre (KMBRC) include those of the Kent Coleoptera database. Records are drawn from a wide variety of sources including professional surveys, volunteer recording, national recording schemes, iRecord, iNaturalist, and the NBN Atlas. The records used in this analysis included all those of at least tetrad resolution whose grid squares at least partially overlapped the proposed Super NNR boundary (Figure 1). Hectad (10 x 10 km) resolution records, which are mostly pre-1960's have not been used. Consequently, records of species discussed here may not necessarily have been observed within the proposed NNR boundary but have been considered where the appropriate habitat is present. Some clearly irrelevant records, such as those for saltmarsh species have been discarded.

Of the 927 beetle species recorded in the proposed Super NNR area, 135 have a conservation status attributed to them (Appendix 1). Furthermore, there are twelve species of high conservation status (Table 1).

Family	Species	Current conservation status
Jewel Beetles	<i>Trachys troglodytes</i>	Nationally Rare
Ground Beetles	<i>Scybalicus oblongiusculus</i>	IUCN Vulnerable; Nationally Rare
Leaf Beetles	<i>Cryptocephalus sexpunctatus</i>	IUCN Endangered; Nationally Rare; S41. Priority Species
Leaf Beetles	<i>Longitarsus nigrofasciatus</i>	Nationally Rare
Leaf Beetles	<i>Longitarsus quadriguttatus</i>	Nationally Rare
Weevils	<i>Lymantior coryli</i>	Red Data Book 1
Weevils	<i>Smicronyx reichii</i>	Red Data Book 3
Handsome Fungus Beetles	<i>Lycoperdina bovistae</i>	Red Data Book 3
Oil Beetles	<i>Lytta vesicatoria</i>	Nationally Rare
Tumbling Flower Beetles	<i>Mordellistena brevicauda</i>	Nationally Rare
Tumbling Flower Beetles	<i>Mordellistena pseudopumila</i>	Nationally Rare
False Oil Beetles	<i>Oedemera virescens</i>	Nationally Rare

Table 1 Beetle species in the proposed Super NNR area with elevated conservation statutes

The beetle records cover the whole of the proposed Super NNR area. However, more precisely located modern records (Monad or better) are concentrated in the publicly accessible areas of Ranscombe Farm, Shorne Woods, Cobham Woods, and Jeskyns Community Woodland (Figure 1). There are few modern records Silverhand Estate and Holborough Woodlands and should be the focus of invertebrate recording where access allows.

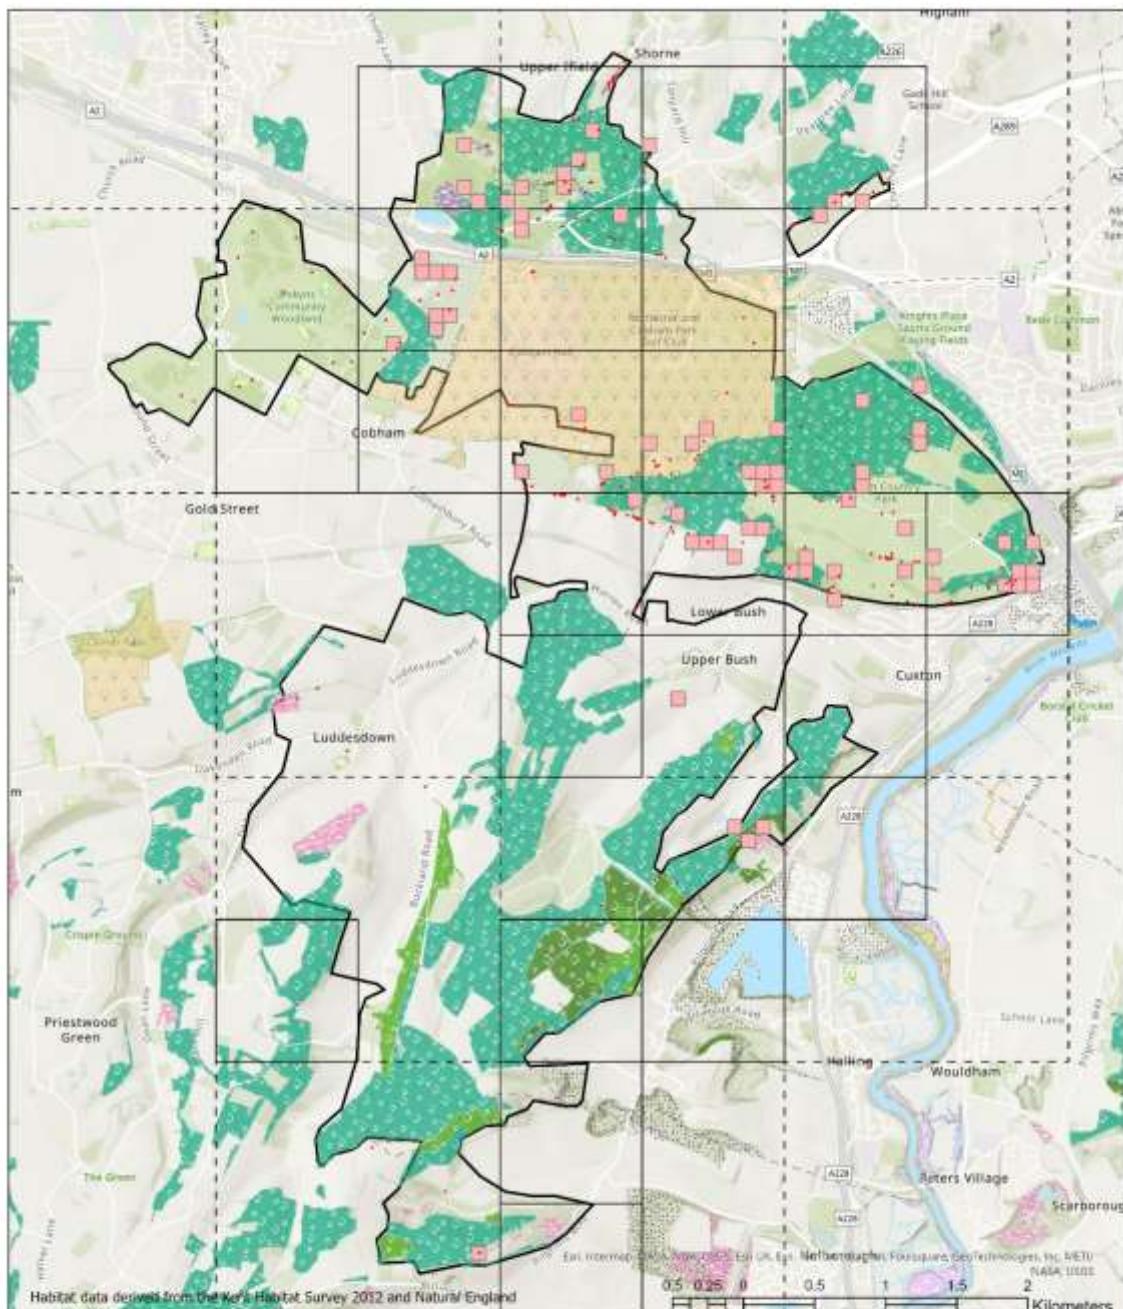

Figure 1 The distribution of beetle records in the proposed North Kent Super NNR area. Each black square on the map represents the spatial resolution of the record. 2x2 km tetrad records tend to be older: mainly pre 2000.

Pantheon Analysis

Pantheon³ is a database of invertebrate habitat traits. It is compiled by national invertebrate experts and can be used to analyse species lists to determine the most important habitats and resources for invertebrate conservation at a site. Table 2 (below) shows the most important habitats and specific assemblage types (SAT) within the proposed Super NNR area.

Broad biotope	Habitat	Specific Assemblage Type	No. of species	Reported condition	Species with conservation status
open habitats	short sward & bare ground	open short sward	37	Favourable (37 species, 13 required)	17
open habitats	short sward & bare ground	bare sand & chalk	18	Unfavourable (18 species, 19 required)	12
open habitats		scrub-heath & moorland	15	Favourable (15 species, 9 required)	0
open habitats	tall sward and scrub		346		31
Tree-associated	arboreal		57		7
tree-associated	decaying wood	heartwood decay	14	Favourable (14 species, 6 required)	5
tree-associated	decaying wood	fungal fruiting bodies	17	Favourable (17 species, 7 required)	4
tree-associated	decaying wood	bark & sapwood decay	79	Favourable (79 species, 19 required)	17
wetland	marshland	open water on disturbed mineral sediments	10	Favourable (10 species, 6 required)	3

Table 2 Important species assemblages in the proposed North Kent Super NNR area, derived from the PANTHEON database

Significant Habitat Assemblages

The following sections describe the important assemblages and highlights species of particular interest. Appendix 2 lists all species in each assemblage and gives associated food plants where appropriate.

Open Habitats

Open Short Sward Specific Assemblage Type

Thirty-seven species of beetle are associated with open short swards in the proposed Super NNR area indicating that this habitat assemblage is in favourable condition. The majority of these are confined to some extent to dry chalk soils and reliant on calcicole plants. Species of particular note include:

- the Nationally Rare flea beetle *Longitarsus nigrofasciatus* on figworts and mulleins. Recorded only once at tetrad level near Ham Hill in 1987, so doubtfully within the proposed NNR boundary, the only other Kent record is for Trottiscliffe. Worth checking for on the food plants.

³ <https://pantheon.brc.ac.uk/>

- the Nationally Rare flea beetle *Longitarsus quadriguttatus* on hound's-tongue. Upper Halling Quarry 1996.
- the weevil *Smicronyx reichii* in seed heads of common centaury. Recorded in 1996 and 2013 around Upper Halling.

Bare Sand and Chalk Specific Assemblage Type

Eighteen species of beetle in the proposed Super NNR area are associated with bare sand and chalk. This is one species short of being assessed in favourable condition. A number of species are restricted to chalk grassland or reliant on plants of disturbed ground i.e. arable field margins. Scarce species recorded in the proposed Super NNR area include:

- the Nationally Scarce Bombardier Beetle *Brachinus crepitans*, recorded recently from Great Crabbles Wood and Ranscombe Farm.
- the Nationally Scarce ground beetle *Notiophilus quadripunctatus* found by pitfall trapping at Great Crabbles Wood in 2009.
- the Nationally Scarce ground beetle *Ophonus azureus* at Ranscombe Farm 2017.
- the Nationally Scarce wild mignonette dependant weevil *Aulacobaris picicornis*. Holborough Quarry 1996
- the Nationally Scarce poppy dependant weevil *Stenocarus ruficornis*. Cobham Wood 1998

The Vulnerable ground beetle *Scybalicus oblongiusculus* was found at the edge of an arable field near Cuxton in 2000. For some reason this species is not included in the bare sand and chalk SAT on Pantheon, despite its British localities all being open chalk grassland or brownfield sites. The inclusion of this species would bring the assessment up to favourable condition.

Scrub-heath and Moorland Specific Assemblage Type

Fifteen species are associated with scrub-heath and moorland, a habitat of nutrient poor acid soils. None of the recorded species have a conservation status and are considered to be widespread and common where plants such as Broom, Gorse, Common Sorrel and Wood Sage occur.

Tall Sward and Scrub Habitat

Tall sward and scrub is a very significant habitat in the proposed Super NNR area with 346 species of beetle associated with it, 31 of which have a conservation status. There are two Specific Assemblage Types (SAT) associated with this habitat, however the species in the proposed Super NNR list do not align well with either of them. The Scrub Edge SAT has 7 beetle species associated with it and is graded as unfavourable condition. The other SAT is Flower Rich Resource which only considers aculeates. When all species groups are considered in the Pantheon analysis both of these SATs are very strongly represented and assessed as favourable condition. Four of the most important beetles within the proposed Super NNR boundary are associated with tall sward and scrub:

- The Endangered Six-spotted Pot Beetle (*Cryptocephalus sexpunctatus*) was recently discovered at Crabbles Bottom on hazel.

- The Nationally Rare Devil's-bit Jewel Beetle (*Trachys troglodytes*). Recorded near Cuxton (TQ7067) in 1900. Devil's-bit scabious is found at Crookhorn Wood (part of Holborough Woods) so this beetle should be sought here.
- The Nationally Rare handsome fungus beetle *Lycoperdina bovistae* found in puffball and earthstar fungi. Recorded near Holborough Woodlands in 2003.
- The Nationally Rare false oil beetle *Oedemera virescens*. Recorded in the Ranscombe/Cuxton area in 2007.

The Spanish Fly beetle (*Lytta vesicatoria*) should probably be included in this habitat assemblage. Its habitat requirements are not assessed in Pantheon as it is considered to be a non-native species that has a history of temporary residence in Britain. It has been known to be present at Ranscombe Farm since 2010 and could represent a permanent colonisation under climate change. It is a brood parasite of Anthophora, Colletes, Osmia and Megachile bees in its larval form, and feeds as an adult on the leaves of shrubs and trees including privet, ash, rose and honeysuckle.

Tree Associated Habitats

Arboreal Habitat

This habitat does not have an associated Specific Assemblage Type so its quality cannot be assessed. However, with 57 species associated with this habitat is it significant in the proposed NNR area. Seven species have a conservation status, including the Endangered Six-Spotted Pot Beetle already discussed above.

- Nationally Scarce leaf rolling weevil *Lasiorhynchites comatus* associated with young oak growth. Cobham Wood 1998 and Ranscombe Farm 2019
- Nationally Scarce leaf beetle *Gonioctena decemnotata* which feeds primarily on aspen. Recorded just outside the proposed NNR boundary at a development site in 1995
- Nationally Scarce soldier beetle *Rhagonycha lutea*. Outside the proposed NNR at Upper Halling Quarry and Paddlesworth in 1996

Shaded Woodland Floor Habitat

Thirty-seven beetle species are associated with shaded woodland floor, one has a conservation status:

- Nationally Scarce weevil *Tropiphorus elevatus* which feeds at the roots of shade tolerant woodland plants such as dog's mercury and ransoms. Great Crabbles Wood in 2009.

Dead Wood Habitats

Cobham Park has long been known to Coleopterists for its beetle fauna, most notably its assemblage of deadwood specialists (saproxyllic species). In his review of ancient parklands in Britain Keith Alexander⁴ graded Cobham Park and Woods as nationally important for its assemblage of saproxyllic beetles, and the fourth most important site in Kent. In 2011 a late

⁴ Alexander, K.N.A (2004) Revision of the Index of Ecological Continuity as used for saproxyllic beetles. English Nature Research Report 574

season survey of the saproxylic fauna of Shorne Woods Country Park⁵ noted the site's historic importance for two species: The Red-Necked Click Beetle *Ischnodes sanguinicollis* and the Southern Oyster Mushroom Beetle *Triplax lacordairii*.

Shorne and Ashenbank Woods Site of Special Scientific Interest is designated for its saproxylic fauna, though only the tumbling flower beetle *Mordella holomelaena*⁶ is named in the citation.

Index of Ecological Continuity (IEC)

The Index of Ecological Continuity (IEC) is a method of assessing the deadwood assemblage of beetle species to estimate a site's importance for their conservation in Britain. All known deadwood beetles are graded from 1 to 3 depending on their fidelity to ancient woodland and ancient wood pasture sites.

IEC 1 - Species which occur widely in wooded land, but which are collectively characteristic of ancient woodland with dead-wood habitats.

IEC 2 - Species which occur mainly in areas believed to be ancient woodland with abundant dead-wood habitats, but which also appear to have been recorded from areas that may not be ancient woodland or for which the locality data are imprecise.

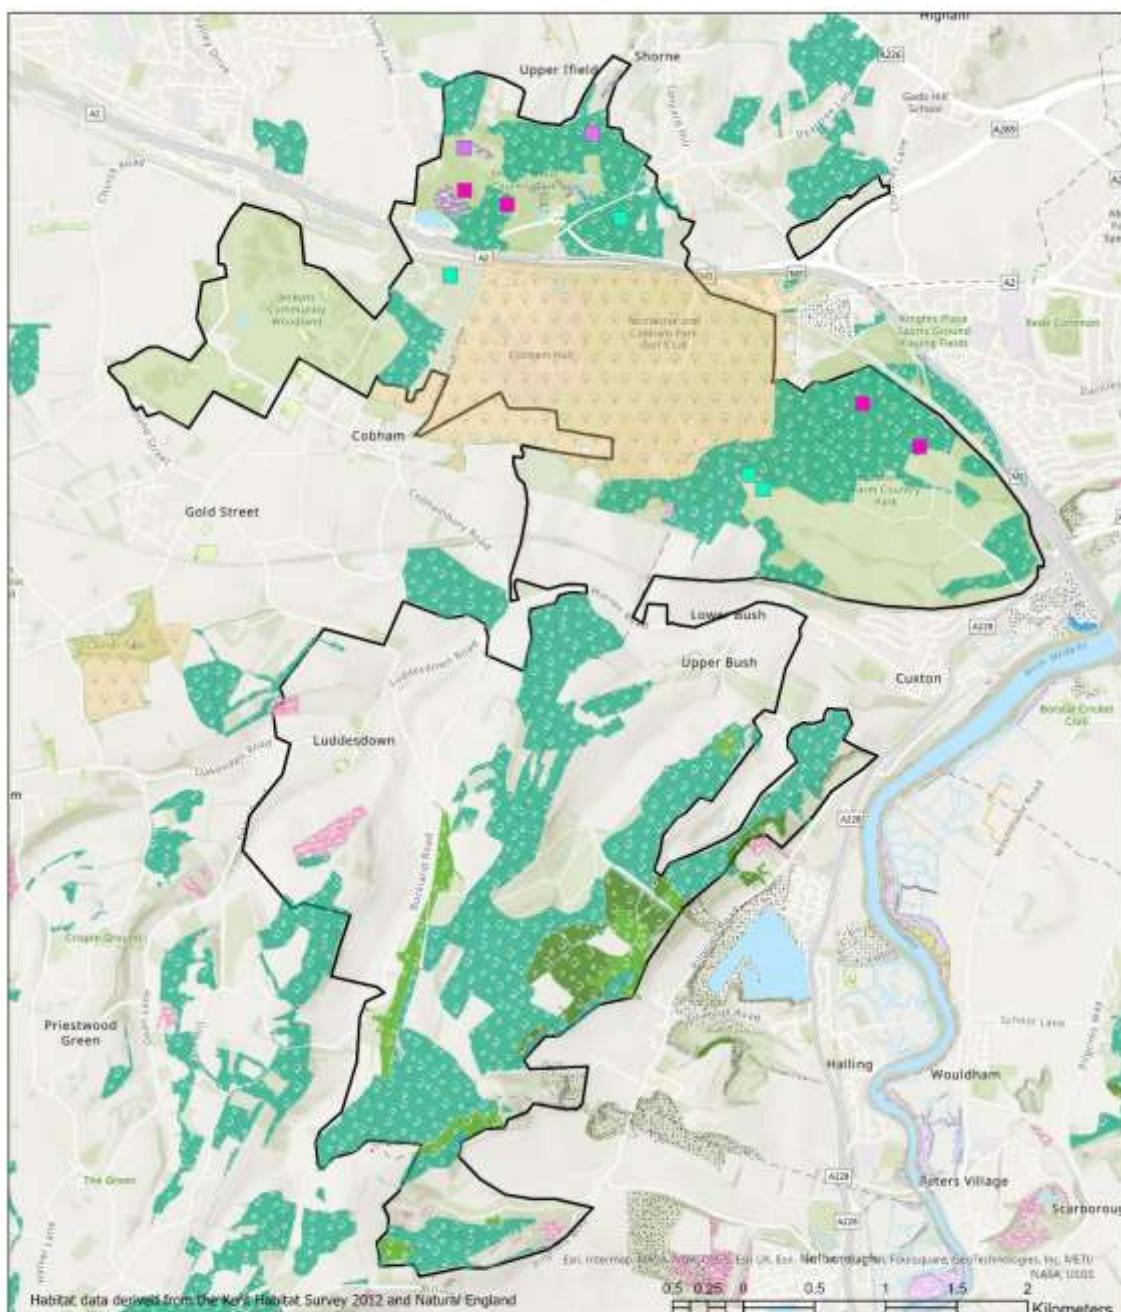

IEC 3 - Species which are known to have occurred in recent times only in areas believed to be ancient woodland, mainly pasture-woodland.

The published IEC score for Cobham Park and Woods is 40 (IEC scores of 25-79 are sites of national importance) (Alexander, 2004). The records held by KMBRC are evidently incomplete as the IEC score in our records only accounts for a score of 24. A comprehensive site-wide survey of the saproxylic beetle fauna should be considered a priority. The late season survey mentioned above yielded an IEC score of 21 (Alexander, 2012).

Map 2 shows the distribution of modern spatially precise IEC rated species records. They are split between Shorne Woods Country Park and Ranscombe Farm.

⁵ Alexander, K.N.A. (2012) Shorne Woods Country Park, Deadwood Invertebrate Survey, Deadwood Quality Assessment. Ecosulis report for KCC

⁶ KMBRC holds no records of this species in the proposed NNR area

Legend

Index of Ecological Continuity

- IEC 1
- IEC 2

- Coastal salt marshes

Coastal saltmarsh

Atlantic salt meadows

Glasswort and other annuals colonising mud and sand

Intertidal rock and sediment

- Intertidal underboulder communities
- Intertidal mudflats and sandbars

Figure 2 Index of Ecological Continuity (IEC) deadwood beetle records in the proposed North Kent Super NNR area

Heart Wood Decay Specific Assemblage Type

Fourteen species of beetle in the proposed Super NNR area rely on heart wood decay in trees, mainly Oak, Beech, and Elm. Six species are considered to be indicative of Ancient Woodland, including:

- The Nationally Rare longhorn beetle *Stictoleptura scutellata* (IEC 3) develops over two to three years in dry dead xylem of a range of broadleaved trees including oak, beech, hornbeam, and horse chestnut. Recorded from Cobham Woods and Ranscombe Farm.
- The Nationally Rare click beetle *Ischnodes sanguinicollis* (IEC 2) is associated with veteran beech and elm trees where it develops in moist heart rot. In Kent it has been recorded from Darenth Wood (1989) and Lynsted Orchard (2004).
- The Nationally Rare ant-like flower beetle *Euglenes oculatus* (IEC 1) is associated with damp heartrot of veteran oak trees. Found at Ranscombe Farm in 2019.

Fungal Fruiting Bodies Specific Assemblage Type

Seventeen species of beetle in the proposed Super NNR area are associated with fungal fruiting bodies on dead wood, resulting in a favourable condition assessment in Pantheon. Notable species in this assemblage are:

- Southern Oyster Mushroom Beetle (*Triplax lacordairii*) (IEC 1) is considered to be IUCN Endangered in Europe, and rare in Britain. It is usually found in annual bracket fungi on dead Beech trees, i.e. *Pleurotus* spp, *Laetiporus sulphureus*, *Polyporus* spp. The KMBRC database does not hold any records of this species in the proposed Super NNR area, so it should be a target for surveying.
- The hairy fungus beetle *Pseudotriphyllus suturalis* (IEC 1) is scarce in Britain and is Globally Near Threatened. It is associated with the annual bracket fungus *Laetiporus sulphureus*, often on damaged oak trees. It was recorded in Cobham Park in 1985.

Bark and Sapwood Decay Specific Assemblage Type

Seventy-nine species of beetle in the proposed Super NNR area belong to this SAT, which is assessed to be in favourable condition by Pantheon. Seventeen have conservation statuses, notable species among them include:

- The weevil *Lymantor coryli* has only been recorded from 9 hectads nationally and would likely qualify for IUCN Vulnerable status if assessed. It is often associated with aerial dead hazel twigs infected with a Diaporthe spp. fungus. Cobham Park 1897.
- The Nationally Scarce fungus weevil *Platystomos albinus* (IES 1) associated with fungi infected dead branches and trunks of beech, sweet chestnut, and oaks. It has been recorded four times in the proposed Super NNR area, from Ranscombe Farm and Cobham Park
- The Nationally Scarce flat bark beetle *Uleiota planatus* (IEC 2) associated with recently dead beech, sweet chestnut and oak. Recorded in Strood (tetrad record) in 1997, Leybourne (1991) and widely across Kent so likely to be present in the proposed NNR.

Wetland Habitats

Open Water on Disturbed Mineral Sediments Specific Assemblage Type

Ten beetle species represent the open water on disturbed mineral sediment SAT, which is the only wetland SAT in favourable condition in the proposed Super NNR area. Notable species include:

- The Nationally Scarce weevil *Phytobius leucogaster* associated with water milfoils *Myriophyllum* spp. Recorded from Higham (tetrad record) in 1963. Spiked water-milfoil is present at Cobham Woods so may be worth sampling for this beetle.
- The Nationally Scarce crawling water beetle *Peltodytes caesus*. Shorne Woods 1983.
- The Nationally Scarce water scavenger beetle *Berosus luridus*. Shorne Woods Country Park in 2006.

Concluding Remarks

The proposed North Kent Super National Nature Reserve encompasses an area of national importance for beetles. The mix of habitats present supports almost a quarter of the UK's beetle species⁷, and a third of Kent's. It is an area renowned for its deadwood specialists, indicative of woodland habitats of great age and continuity. Amongst the 927 beetle species recorded, over 100 rare and threatened species can be found in almost all habitats present from bare ground, short sward, tall sward, calcareous grassland, acid grassland, scrub, coppice woodland, high forest, ponds, and veteran trees in woods and parkland settings.

In recent times recording effort has been focussed on the public sites like Ranscombe Farm, Cobham Woods, Shorne Woods etc., consequently there is little contemporary information about areas such as Silverhand Estate and the Holborough Woodlands. The recent discovery of the Vulnerable Six-spotted Pot-beetle at Crabbles Bottom highlights that there is still much to learn in this landscape and further survey work and casual visits by entomologists will undoubtedly yield further surprising discoveries.

Appendix 1 – Rare and Threatened Species

Family	Species	Current conservation status	Larval feeding guild	Adult feeding guild	Habitat

Rove beetles	<i>Philonthus confinis</i>	Nationally Scarce			
Rove beetles	<i>Quedius riparius</i>	Nationally Scarce	predator	predator	running water
Darkling beetles	<i>Gonodera luperus</i>	Nationally Scarce	unknown	nectivore	decaying wood
Ironclad beetles	<i>Synchita variegata</i>	Nationally Scarce	fungivore	fungivore	decaying wood

Appendix 2 – Species Assemblage Tables

Open Short Sward SAT

Family	Species	SQS ⁸	Larval feeding guild	Adult feeding guild	Habitat fidelity	Associations
Seed weevils	<i>Hemitrichapion waltoni</i>	1	herbivore	herbivore	calcareous grassland: High	Hippocrepis
Seed weevils	<i>Protaetia filirostre</i>	4	herbivore	herbivore	calcareous grassland: Moderate	Medicago
Seed weevils	<i>Protaetia ononidis</i>	1	herbivore	herbivore	calcareous grassland: Moderate	Ononis repens
Seed weevils	<i>Squamapion atomarium</i>	1	herbivore	herbivore	calcareous grassland: Moderate	Thymus
Seed weevils	<i>Squamapion cineraceum</i>	4	herbivore	herbivore	calcareous grassland: High	Prunella
Seed weevils	<i>Squamapion flavimanum</i>	4	herbivore	herbivore	calcareous grassland: High	Origanum
Leaf beetles	<i>Altica helianthemi</i>	1	herbivore	herbivore	calcareous grassland: High	Helianthemum
Leaf beetles	<i>Aphthona herbigrada</i>	1	herbivore	herbivore	calcareous grassland: High	Helianthemum

⁸ SQS Species Quality Score, a measure of a species rarity used to assess site quality. 1 = widespread, 4 = nationally scarce, 8 = nationally rare/ IUCN Vulnerable, 16 = IUCN Endangered

Leaf beetles	<i>Chrysolina hyperici</i>	1	herbivore	herbivore	calcareous grassland: Low	Hypericum
Leaf beetles	<i>Cryptocephalus fulvus</i>	1	herbivore	herbivore	calcareous grassland: Moderate	
Leaf beetles	<i>Cryptocephalus hypochaeridis</i>	4	herbivore	herbivore	calcareous grassland: Moderate	Asteraceae
Leaf beetles	<i>Cryptocephalus moraei</i>	1	herbivore	herbivore	calcareous grassland: Low	Hypericum
Leaf beetles	<i>Longitarsus anchusae</i>	4	herbivore	herbivore	calcareous grassland: Moderate	Boraginaceae
Leaf beetles	<i>Longitarsus exsoletus</i>	1	herbivore	herbivore	calcareous grassland: Moderate	Boraginaceae
Leaf beetles	<i>Longitarsus lycopi</i>	4	herbivore	herbivore	calcareous grassland: Moderate	Lamiaceae
Leaf beetles	<i>Longitarsus nigrofasciatus</i>	8	herbivore	herbivore	calcareous grassland: High	Scrophulariaceae
Leaf beetles	<i>Longitarsus obliteratus</i>	4	herbivore	herbivore	calcareous grassland: High	Lamiaceae
Leaf beetles	<i>Longitarsus quadriguttatus</i>	8	herbivore	herbivore	calcareous grassland: Moderate	Cynoglossum
Leaf beetles	<i>Longitarsus strigicollis</i>	4	herbivore	herbivore	calcareous grassland: High, soft rock cliff: 3	Dipsacus
Leaf beetles	<i>Mantura matthewsii</i>	1	herbivore	herbivore	calcareous grassland: High	Helianthemum
Ladybirds	<i>Scymnus frontalis</i>	1	saprophagous	saprophagous		
Weevils	<i>Calosirus terminatus</i>	4	herbivore	herbivore	calcareous grassland: Low, soft rock cliff: 3	Daucus
Weevils	<i>Cleopomiarus graminis</i>	4	herbivore	herbivore	calcareous grassland: High	Campanula
Weevils	<i>Sitona waterhousei</i>	4	herbivore	herbivore	calcareous grassland: Low, soft rock cliff: 3	Lotus
Weevils	<i>Smicronyx reichii</i>	8	herbivore	herbivore	calcareous grassland: High	Centaurea
Weevils	<i>Trachyphloeus spinimanus</i>	1	herbivore	herbivore	calcareous grassland: High	
Weevils	<i>Tychius junceus</i>	1	herbivore	herbivore	calcareous grassland: High	Fabaceae
Weevils	<i>Tychius meliloti</i>	1	herbivore	herbivore	calcareous grassland: Low	Melilotus

Weevils	<i>Tychius schneideri</i>	4	herbivore	herbivore	calcareous grassland: Moderate	Anthyllis vulneraria
Weevils	<i>Tychius squamulatus</i>	4	herbivore	herbivore	calcareous grassland: Moderate	Lotus
Weevils	<i>Tychius stephensi</i>	1	herbivore	herbivore	calcareous grassland: Moderate	Trifolium
Click beetles	<i>Agrypnus murinus</i>	1	herbivore	unknown	calcareous grassland: Moderate	
Glow-worms	<i>Lampyris noctiluca</i>	1	parasitoid	does not feed	calcareous grassland: Moderate	Mollusca
Soft-winged flower beetles	<i>Cordylepherus viridis</i>	1	herbivore	nectivore		
Rove beetles	<i>Platystethus capito</i>	1	saprophagous	saprophagous	calcareous grassland: High	
Rove beetles	<i>Stenus ochropus</i>		predator	predator	calcareous grassland: High	
Darkling beetles	<i>Isomira murina</i>	1	herbivore	unknown		

Bare Sand and Chalk SAT

Family	Species	SQS	Larval feeding guild	Adult feeding guild	Habitat fidelity	Associations
Antlike flower beetles	<i>Notoxus monoceros</i>	1	saprophagous	saprophagous		
Ground beetles	<i>Amara eurynota</i>	1	herbivore

Minute bark beetles	<i>Cerylon histeroides</i>	1	fungivore	fungivore	conifer or broadleaved; broadleaved only, sapwood & bark decay; bark & cambium		Fagales
Flat bark beetles	<i>Pediacus dermestoides</i>	1	predator	nectivore	freshly dead broadleaved trunks & branches, flowers (adult)	IEC: 1	Plantae, Quercus
Weevils	<i>Acalles misellus</i>	1	xylophagous	unknown	dead broadleaved trunks & branches		Hedera

Weevils	<i>Acalles ptinoides</i>	4	xylophagous	unknown	conifer dead trunks & branches		Calluna, Quercus
Weevils	<i>Anisandrus dispar</i>	4	fungivore	unknown	freshly dead broadleaved trunks & branches	IEC: 1	Betula, Quercus
Weevils	<i>Dryocoetes villosus</i>	1	xylophagous	unknown	freshly dead broadleaved trunks & branches		Quercus
Weevils	<i>Ernoporicus fagi</i>	4	xylophagous	unknown	freshly dead broadleaved trunks & branches	IEC: 1	Fagus
Weevils	<i>Hylesinus varius</i>	1	xylophagous	unknown	freshly dead broadleaved trunks & branches		Fraxinus
Weevils	<i>Kyklioacalles roboris</i>	4	xylophagous	unknown	dead broadleaved trunks & branches		Fagales
Weevils	<i>Lymantor coryli</i>	16	xylophagous	unknown	dead broadleaved trunks & branches; aerial branches		Corylus
Weevils	<i>Magdalais armigera</i>	1	xylophagous	nectivore	dead broadleaved trunks & branches, flowers (adult)		
Weevils	<i>Platypus cylindrus</i>	4	xylophagous	unknown	freshly dead broadleaved trunks & branches	IEC: 1	Quercus
Weevils	<i>Scolytus multistriatus</i>	1	xylophagous	unknown	freshly dead broadleaved trunks & branches		Ulmus
Weevils	<i>Scolytus pygmaeus</i>		xylophagous	unknown	freshly dead broadleaved trunks & branches		Ulmus
Weevils	<i>Scolytus scolytus</i>	1	xylophagous	unknown	freshly dead broadleaved trunks & branches		Ulmus
Weevils	<i>Taphrorychus bicolor</i>	4	xylophagous	unknown	freshly dead broadleaved trunks & branches		Carpinus, Fagus, Quercus
Weevils	<i>Trachodes hispidus</i>	4	unknown	unknown	dead broadleaved trunks & branches	IEC: 1	Plantae, Quercus
Weevils	<i>Trypodendron domesticum</i>	1	fungivore	unknown	freshly dead broadleaved trunks & branches	IEC: 1	Fagales
Weevils	<i>Xyleborus dryographus</i>	4	fungivore	unknown	freshly dead broadleaved trunks & branches	IEC: 1	Castanea, Fagus, Quercus, Ulmus
Weevils	<i>Xylocleptes bispinus</i>	1	xylophagous	unknown	dead broadleaved trunks & branches		Clematis
Click beetles	<i>Stenagostus rhombeus</i>	1	predator	does not feed?	dead broadleaved trunks & branches,	IEC: 1	Coleoptera, Fagus

					sapwood & bark decay		
Handsome fungus beetles	<i>Endomychus coccineus</i>	1	fungivore	fungivore	broadleaved only, fungal fruiting bodies, sapwood & bark decay; bark & cambium		Fagus, Salix
Clown beetles	<i>Paromalus flavigornis</i>	1	predator	predator	broadleaved only, sapwood & bark decay; bark & cambium		Fagales
Fungus beetles	<i>Anisotoma humeralis</i>	1	fungivore	fungivore	beneath mouldy bark, broadleaved dead trunks & branches		Fagales
Soft winged flower beetles	<i>Axinotarsus marginalis</i>		predator	predator	dead broadleaved trunks & branches, sapwood & bark decay		Quercus
Soft winged flower beetles	<i>Dasytes plumbeus</i>	4	predator	nectivore	dead broadleaved trunks & branches, sapwood & bark decay, flowers (adult)		Salix
Soft winged flower beetles	<i>Malachius bipustulatus</i>	1	predator	nectivore	dead broadleaved trunks & branches, sapwood & bark decay, flowers (adult)		Fagales
False darkling beetles	<i>Orchesia undulata</i>	1	fungivore	fungivore	dead broadleaved trunks & branches; aerial branches	IEC: 1	Quercus
Root eating beetles	<i>Rhizophagus bipustulatus</i>	1			dead broadleaved trunks & branches, sapwood & bark decay		
Root eating beetles	<i>Rhizophagus ferrugineus</i>	1			dead broadleaved trunks & branches, sapwood & bark decay		
Tumbling flower beetles	<i>Mordellistena neuwaldeggiana</i>	4	unknown	nectivore	dead broadleaved trunks & branches, flowers (adult)	IEC: 1	
Pollen beetles	<i>Carpophilus sexpustulatus</i>	1		unknown	bark & cambium; beneath tight bark, broadleaved only	IEC: 1	Castanea, Plantae
Pollen beetles	<i>Soronia grisea</i>	1	saprofagous	saprofagous	broadleaved only, sapwood & bark decay		Fagales
Wood-borer beetles	<i>Anobium punctatum</i>	1	xylophagous	does not feed?	dead broadleaved trunks & branches		Fagales

Wood-borer beetles	<i>Hemicoelus fulvicornis</i>	1	xylophagous	does not feed?	dead broadleaved trunks & branches		Fagales
Cardinal beetles	<i>Pyrochroa coccinea</i>	1		nectivore	bark & cambium; beneath tight bark dead broadleaved trunks & branches, flowers (adult)	IEC: 1	Fagales
Cardinal beetles	<i>Pyrochroa serraticornis</i>	1		nectivore	bark & cambium; beneath tight bark dead broadleaved trunks & branches, flowers (adult)		Fagales
Narrow waisted bark beetles	<i>Vincenzellus ruficollis</i>	1	predator	predator	bark & cambium; beneath tight bark; broadleaved only		Fagales
False flower beetles	<i>Anaspis costai</i>	4	predator	nectivore	dead broadleaved trunks & branches, flowers (adult)		Fagales
False flower beetles	<i>Anaspis fasciata</i>	1	predator	nectivore	dead broadleaved trunks & branches, flowers (adult)		
False flower beetles	<i>Anaspis frontalis</i>	1	predator	nectivore	dead broadleaved trunks & branches, flowers (adult)		
False flower beetles	<i>Anaspis garneysi</i>	1	predator	nectivore	conifer or broadleaved, flowers (adult), woodmould; dry wood mould		
False flower beetles	<i>Anaspis maculata</i>	1	predator	nectivore	dead broadleaved trunks & branches, flowers (adult)		
False flower beetles	<i>Anaspis pulicaria</i>	1	predator	nectivore	dead broadleaved trunks & branches, flowers (adult)		
False flower beetles	<i>Anaspis regimbarti</i>	1	predator	nectivore	dead broadleaved trunks & branches, sapwood & bark decay, flowers (adult)		Fagales
Flat bark beetles	<i>Silvanus unidentatus</i>	1	predator	predator	bark & cambium; beneath tight bark dead broadleaved trunks & branches	IEC: 1	Quercus
Flat bark beetles	<i>Uleiota planatus</i>	4			freshly dead broadleaved trunks & branches	IEC: 2	Fagales
Dry fungus beetles	<i>Aspidiphorus orbiculatus</i>	1	fungivore	unknown	dead broadleaved trunks & branches, sapwood & bark decay		Fagales
Rove beetles	<i>Dinaraea aequata</i>	1	predator	predator	conifer or broadleaved,		Fagales

					sapwood & bark decay; bark & cambium		
Rove beetles	<i>Homalota plana</i>	1	saprofagous	saprofagous	bark & cambium; beneath loose bark, conifer or broadleaved; broadleaved only		Fagales
Rove beetles	<i>Phloeonomus punctipennis</i>	1	fungivore	fungivore	bark & cambium; beneath tight bark, conifer or broadleaved		Fagales
Rove beetles	<i>Phloeopora testacea</i>	1	predator	predator	conifer or broadleaved, sapwood & bark decay; bark & cambium		Fagales
Rove beetles	<i>Scaphidium quadrimaculatum</i>	1	fungivore	fungivore	broadleaved dead trunks & branches, fungal fruiting bodies		Fagales
Rove beetles	<i>Siagonium quadricorne</i>	1			bark & cambium; beneath tight bark, conifer or broadleaved; broadleaved only		Fagales
Darkling beetles	<i>Corticeus linearis</i>		predator	predator	dead conifer trunks & branches; aerial branches with beetle galleries		Pinus
Ironclad beetles	<i>Bitoma crenata</i>	1	fungivore	fungivore	bark & cambium; beneath tight bark, broadleaved only	IEC: 1	Fagus, Quercus
Ironclad beetles	<i>Pycnomerus fuliginosus</i>		fungivore	fungivore	conifer or broadleaved; broadleaved only, sapwood & bark decay; bark & cambium		Fagales

Open Water on Disturbed Mineral Sediments SAT

Family	Species	SQS	Larval feeding guild	Adult feeding guild	Resources	Associations
Weevils	<i>Phytobius leucogaster</i>	4	herbivore	herbivore	lakeside emergent/aquatic vegetation, shallow freshwater pond ; aquatic: well vegetated	Myriophyllum
Predacious Diving Beetles	<i>Hydroglyphus geminus</i>	1	predator	predator	shallow freshwater pond ; sparsely vegetated	Arthropoda

Predacious Diving Beetles	<i>Rhantus suturalis</i>	1	predator	predator	shallow freshwater pond ; sparsely vegetated	
Crawling Water Beetles	<i>Haliplus immaculatus</i>	1	herbivore	herbivore	base-rich, shallow freshwater pond ; aquatic: sparsely vegetated	
Crawling Water Beetles	<i>Haliplus obliquus</i>	1	herbivore	herbivore	base-rich, shallow freshwater pond ; aquatic: sparsely vegetated; aquatic: well vegetated	
Crawling Water Beetles	<i>Peltodytes caesus</i>	4	predator	predator	shallow freshwater pond ; aquatic: sparsely vegetated	Arthropoda
Water Scavenger Beetles	<i>Anacaena bipustulata</i>	1	saprophagous	predator	drawdown zone: mud/shallow litter, shallow freshwater pond ; aquatic: sparsely vegetated	
Water Scavenger Beetles	<i>Berosus luridus</i>	4	predator	predator	shallow freshwater pond ; aquatic: sparsely vegetated	
Water Scavenger Beetles	<i>Helochares lividus</i>	1	predator	herbivore	shallow freshwater pond ; aquatic: sparsely vegetated	Arthropoda
Water Scavenger Beetles	<i>Laccobius colon</i>	1	predator	predator	drawdown zone: mud/shallow litter, shallow freshwater pond; sparsely vegetated, wave washed edges	Arthropoda
